Nashik, Maharashtra

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, C, C++, SQL

Frameworks: React.js, Next.js, Node.js, Express.js, Tailwind CSS, Shadcn UI,

Databases: PostgreSQL, MongoDB

Developer Tools: VS Code, Postman, Docker, Kubernetes, Cursor, Ansible, Git, Linux

Cloud & DevOps: AWS EC2, AWS S3, AWS IAM, Docker Compose, Nginx, CI/CD, GitHub Webhooks, Cloudflare

Other: JWT, OAuth, GenAI,

EDUCATION

MET Institute of Technology

Nashik, Maharashtra

Bachelor of Technology in Computer Science and Design

Sept. 2023 – Present

- **CGPA:** 7.0/10

- **Coursework:** Computer Architecture, Data Structures and Algorithms, Database Management System

Daksh Gurukul IIT Guwahati

Nashik, Maharashtra

Advanced certification in DevOps and Cloud Computing

Nov. 2025 – Present

- **CGPA:** 7.0/10

- **Coursework:** Linux, Git, AWS, Docker, Kubernetes

EXPERIENCE

Software Developer Intern

March 2025 – July 2025

Acrylic Solutions Pvt. Ltd.

Nashik, Maharashtra

- Built a web application to simplify government form submission for rural users using React, TypeScript, Node.js, Express.js, and Socket.io
- Integrated with official government websites and implemented MongoDB databases for efficient data storage and retrieval
- Designed a user-friendly interface to improve accessibility, adoption, and reduce errors in form submissions

SELECTED PROJECTS

EduFlow – Cloud-Deployed LMS Platform | AWS EC2, Docker, Docker Compose, Nginx, MongoDB, React

- Built a cloud-based Learning Management System with authentication, course management, enrollment, and progress tracking.
- Containerized the application using Docker and deployed it on AWS EC2 with Docker Compose.
- Configured Nginx reverse proxy with HTTPS for secure production deployment.
- GitHub: github.com/Acesoham/LMSapp | Live: eduflow.duckdns.org

MediVault – Telemedicine & Electronic Health Records (EHR) Platform | AWS EC2, Docker, Docker Compose, Nginx

- Built a full-stack telemedicine platform with appointment scheduling, secure Electronic Health Records (EHR), role-based authentication, and doctor/patient dashboards using the MERN stack.
- Containerized services with Docker and deployed them on AWS EC2 using Docker Compose, configuring Nginx reverse proxy with HTTPS for secure production hosting.
- Implemented automated deployment workflows and hosted the application on a custom domain.
- GitHub: github.com/Acesoham/Telemedicine-and-Electronic-Health-Records-EHR-Application | Live: medivault.duckdns.org

FoodHub – Food Delivery & Dine-Out Platform | AWS, Docker, Jenkins, Nginx, MongoDB, React, Typescript

- Developed a multi-service platform supporting food delivery, dine-out reservations, event bookings with Stripe payments, and Google Maps integration.
- Deployed containerized frontend and backend services on AWS EC2 using Docker, Nginx reverse proxy, SSL, and custom domain configuration.
- Implemented CI/CD automation with Jenkins, GitHub Webhooks, and Docker Compose, enabling automated build and deployment pipelines.
- GitHub: github.com/Acesoham/Food-Delivery-and-Dine-Out-Hospitality-Platform | Live: foodhub.dedyn.io
